Inspection			
System	Standard	Pass	Fail
Roof Drains	Roof drains and leaders Roof drains should not be connected to the sanitary sewer but should discharge to the ground outside of a building. If the roof drains are connected to the sanitary sewer, disconnect them, plug any open connections to the sanitary sewer using a non-shrink permanent material, and redirect the roof drains onto the ground outside the building.		
Foundation Drains	Foundation drains are underground pipes that collect storm water from around the base of a building and into a sump basket, where it is then pumped outside of the building. Foundation drains should not be connected to the sanitary sewer.		
Sump Pumps	Sump pumps are designed to capture surface or ground water that enters basements or crawl spaces and pump it away from the house. The basic sump system includes drain tile, a sump pit, a sump pump, a float or switch, and a drain line. Sump pumps should not be connected to the sanitary sewer.		
Sewer Service Line	Sanitary Sewer Inflow & Infiltration (I/I) Compliance Inspection Sanitary Sewer Lines. All sanitary sewer lines serving Property, from the house to the main line, shall be in a safe and functional condition and shall be free from all leaks, failures including but not limited to partially collapsed sections or tree root intrusion. The sanitary sewer lines shall meet the City Code standards and specifications. (Details on back of this sheet)	✓	
Notes:	The video is pretty blurry and there is a lot of sag in the pipe that is holding water, with it being that way the camera is underwater and we cannot see the pipe 100%, but from what I can see there isn't signs of I&I. The sag in the pipe is no worry for the city. I do recommend that a new clearer video is provided. We can pass this as long as there is an understanding that we are not liable if something happens that we were unable to see in the video, due to it being blurry or being underwater. - Jimmy Nelson, Supervisor
